

Steam Vapor Cleaning - It's Just Water!

VaporLux - the Most Effective Natural, Healthy Way to Clean, Sanitize, Restore.

Surface profile before cleaning

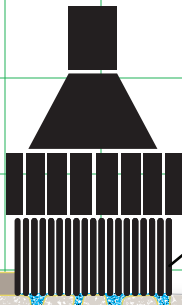

Surface Dirt and Debris

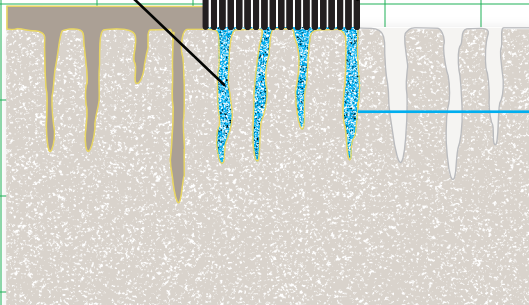

The pores beneath the surface are full of debris which provides food and moisture for mold, mildew and bacterium to flourish.

Cleaning with VaporLux

Vapor about 285 degrees at 72.5 PSI is forced into the smallest pores

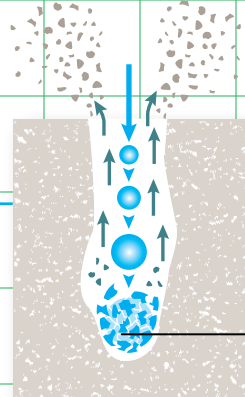

Brushes break the surface tension so the vapor can penetrate

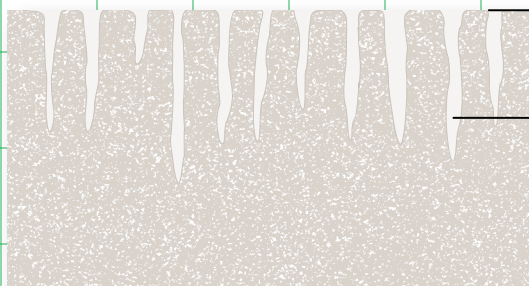

It works by the natural laws of physics.

**No chemicals or caustic cleaning solutions.
JUST ADD WATER!**

Hot gas vapor molecules enter the surface pores and violently expand, killing bacteria and forcing out dirt and debris.

VaporLux result - Surface is clean and sanitized without detergent film or chemical residue

Natural surface colors and textures are restored.

Pores are clean. Conditions are less favorable for bacteria, mold and mildew.

Their food source no longer exists, odors are eliminated and the material dries faster.
